Subject: trivia again!!!!

Stef are you ready for another round of testing trivia questions? If so read on:

Question 1. If the phase of the filter burn has a negative result, so total grams per burn phase X is -0.77 grams, should that negative be subtracted from the total amount OR treated as a zero result?

Question 2. If 90% of the catch is on the second filter, does (or perhaps should it) raise flags for further review. Should it be explained in the redacted report?

Thanks for playing- HAPPY FRIDAY!
